

Lockifi

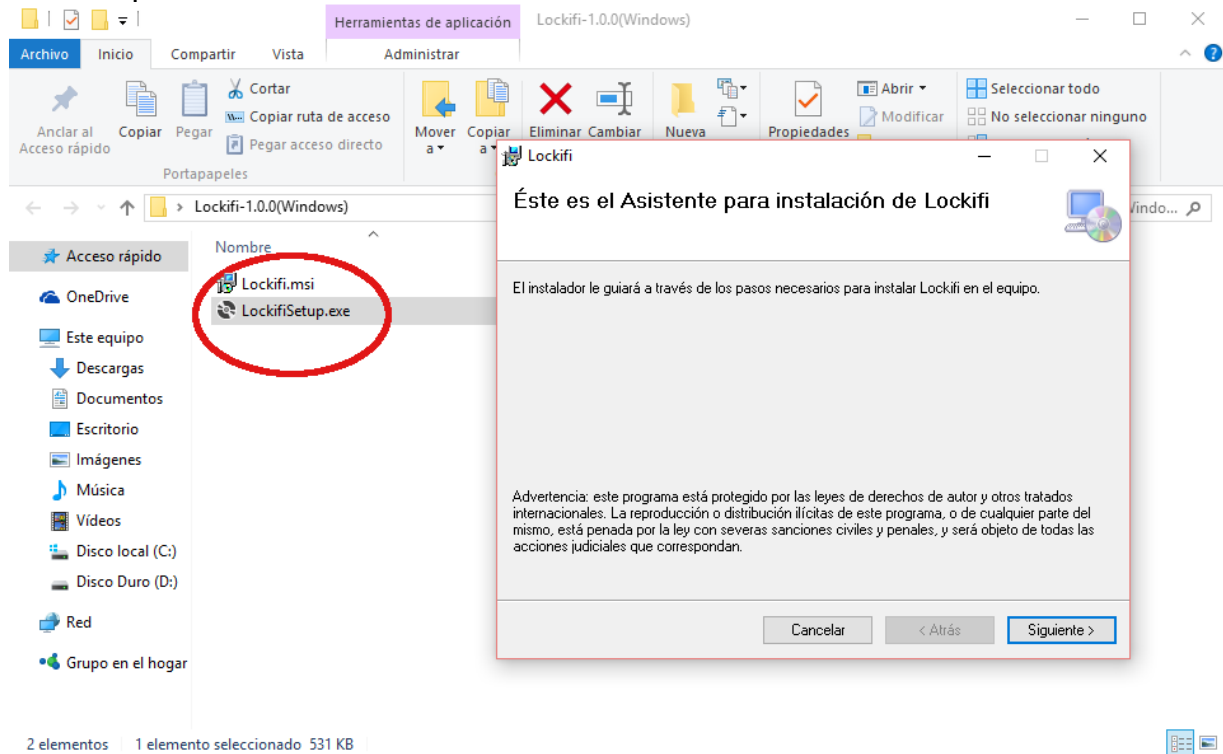

Installation manual of Lockifi

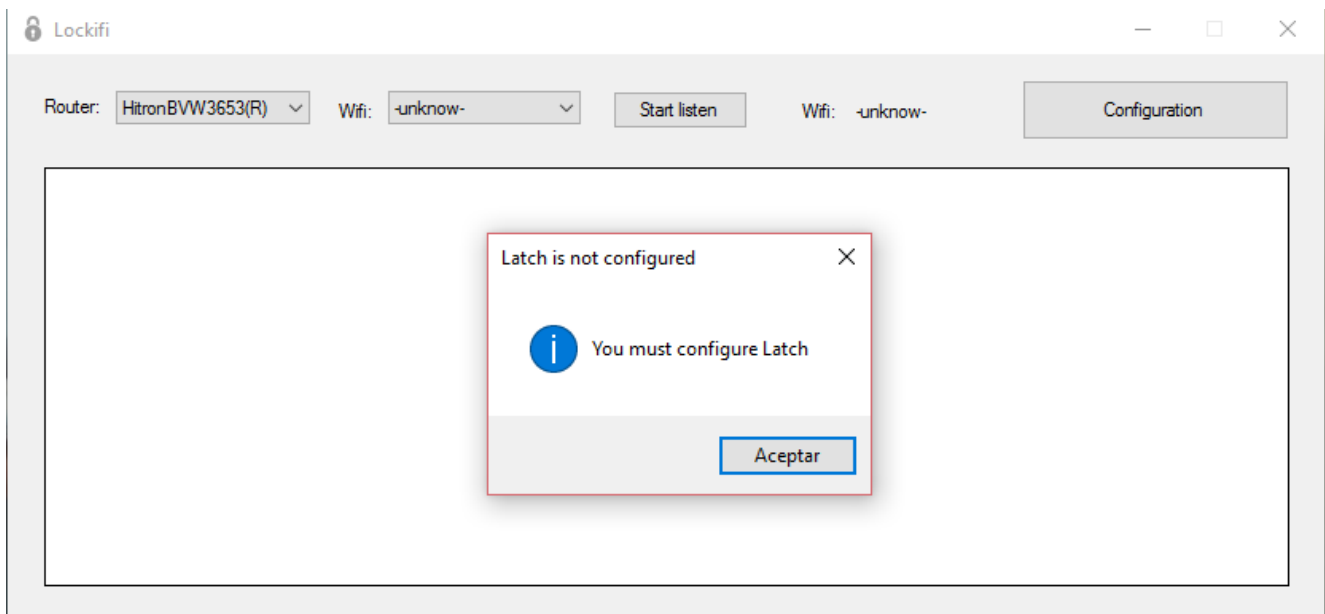

Installation manual of Lockifi

1. Download Lockifi from Github (i.e LockifiSetup.rar), extract it and install it by running LockifiSetup.exe.

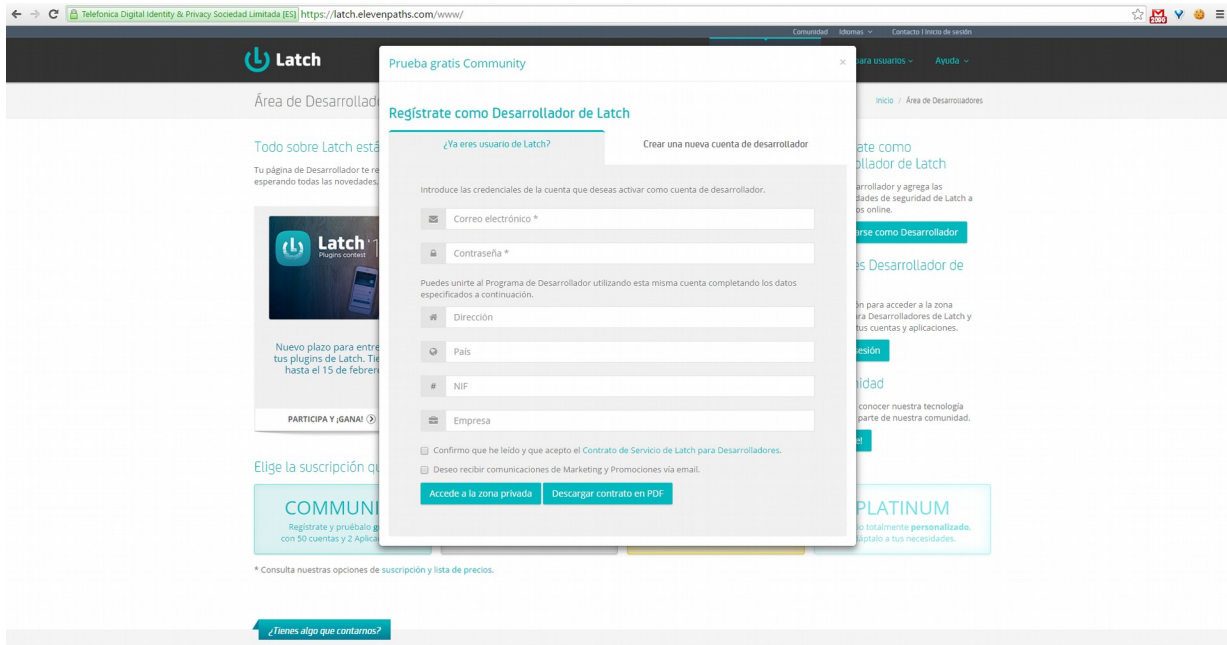

2. Once installed, run the software. It will warn you that Latch has not been configured yet. On the next step you will learn how to configure Latch.

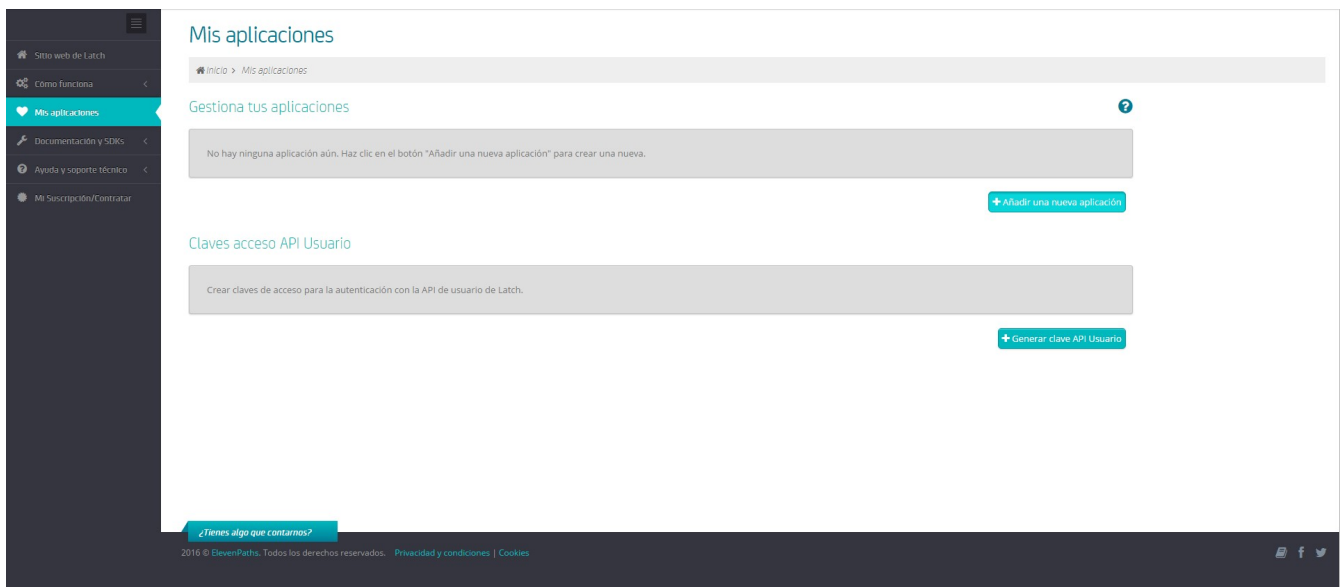

3. Register in Latch. You will receive a confirmation email. Click on the link you will find in the email to gain access.

4. When you are in the developer section of Latch, click on "Add a new application".

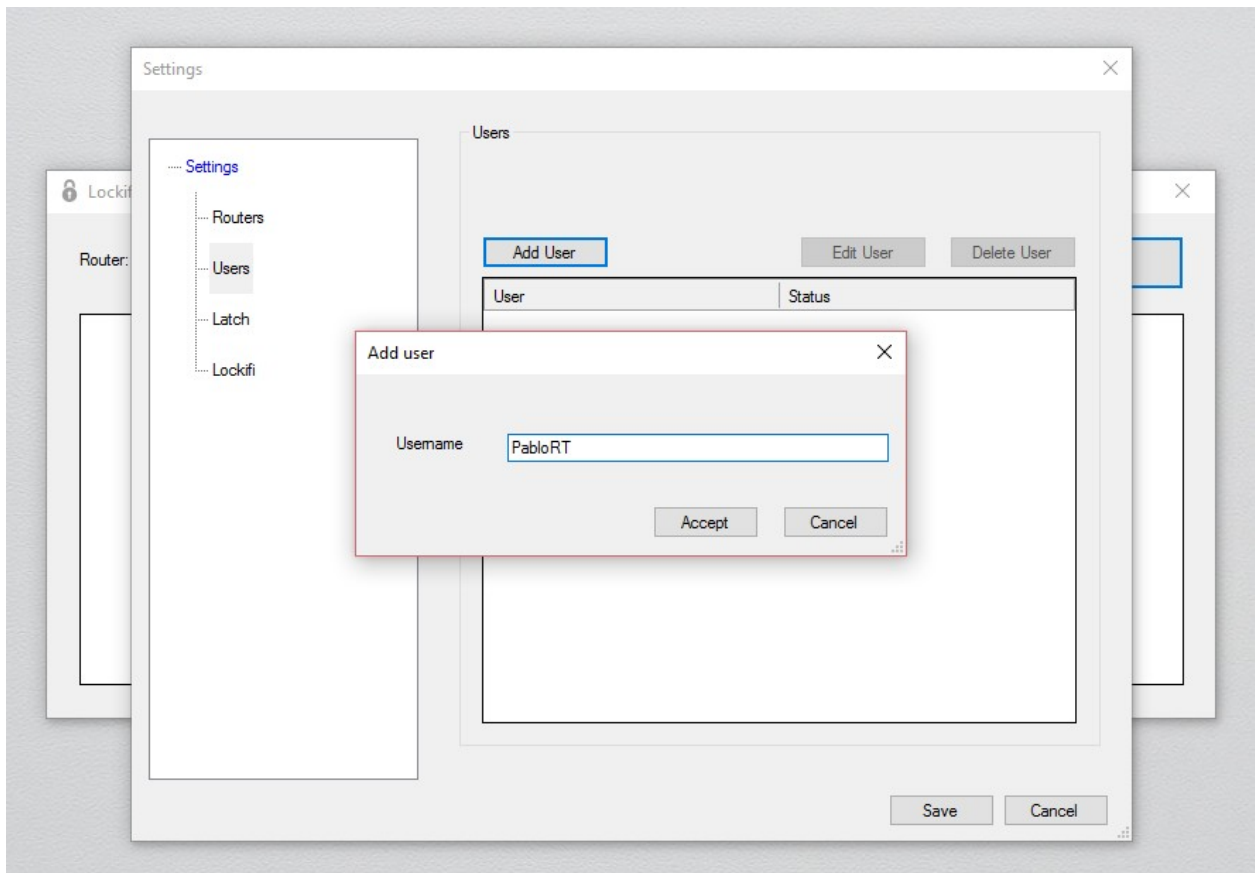

5. Enter the name you identify your app with in order to get your app's config.

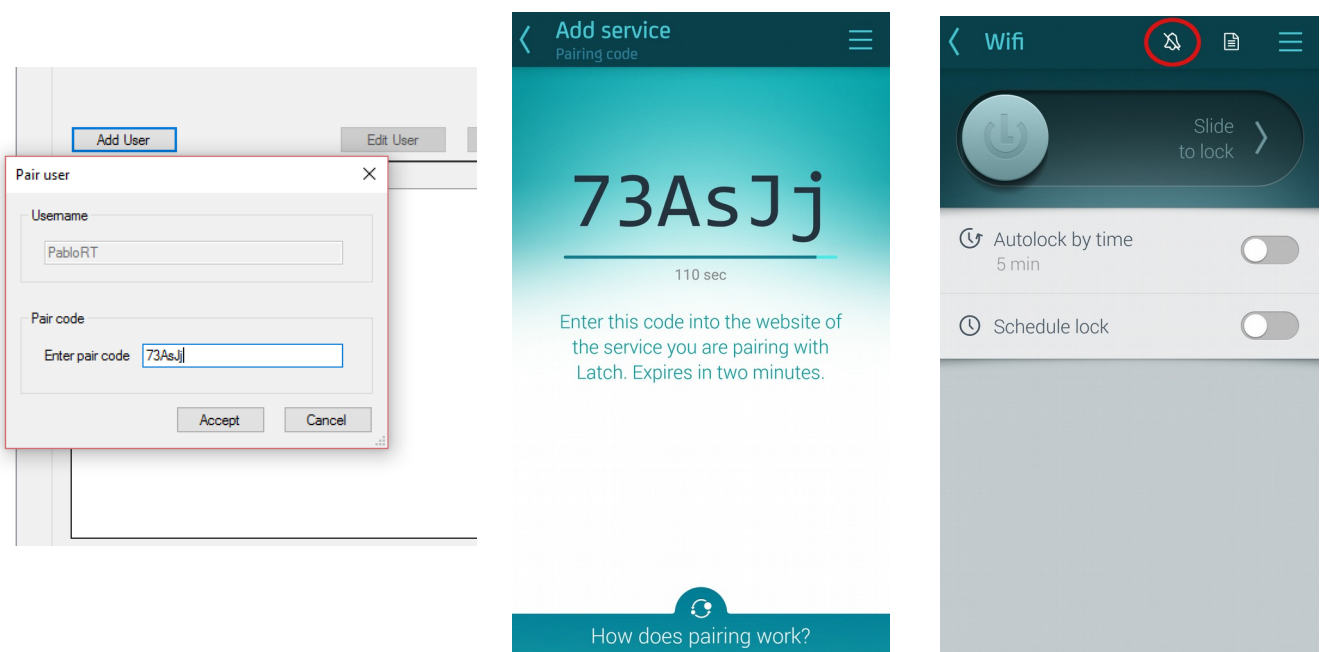

6. Open Lockifi, click on "Settings" and under Lockifi enter both the app ID and the SecretKey you just obtained. Save the config to see everything is correct.

7. Go back to Settings and under Users click on Add Users in order to add a new user to the system. Enter the username and accept.

8 Lockifi will request you enter a pairing code that you have to generate in your Latch app. Enter the pairing code in order to add the user. It is important that you remember to turn off the session block notice.

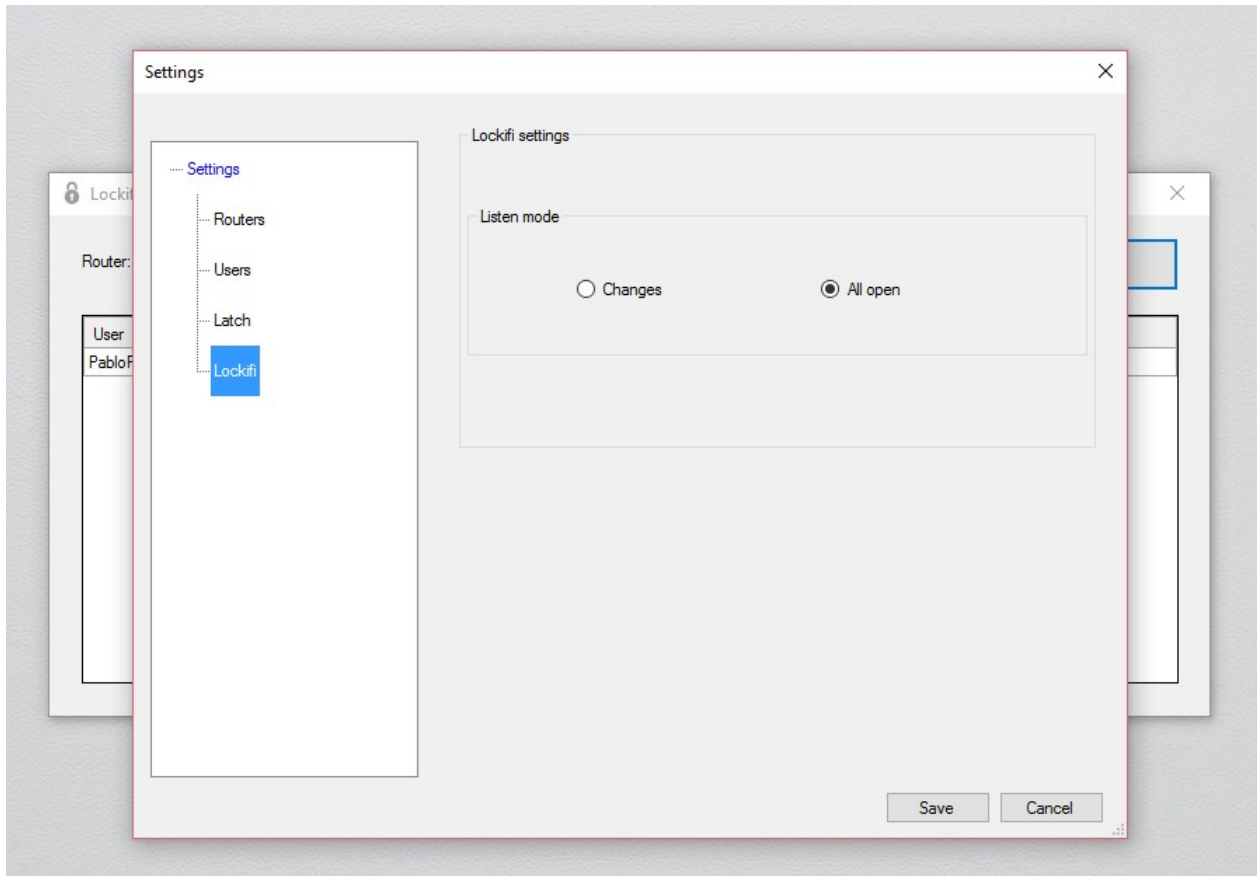

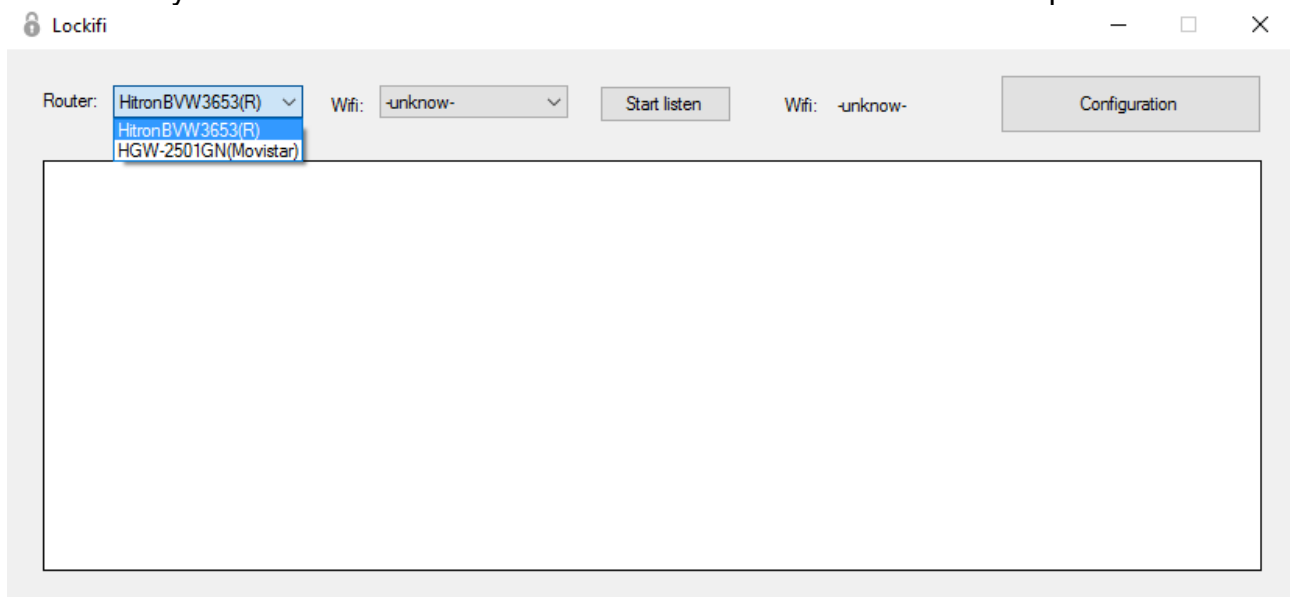

9. Select the Listen Mode under the Lockifi section.

Changes: the software will detect any changes. If any of the users changes his Latch, the system will detect it and set the WiFi connection to that state.

All Open: the WiFi connection turns on only if all users agree by running Latch.

10. Choose your router model and the WiFi connection status from the drop down menu.

11. Click on Start Listen. You can now control your WiFi connection from Latch!
